PRIVATE COMPANY RESEARCH · CHEMICALS SECTOR

Indian Oxides & Chemicals Pvt. Ltd.

CIN: U24300MH1989PTC052085 · Est. 1989 · Pune, Maharashtra

UNLISTED · PRIVATE

Industry: Flame Retardants
Product: Antimony Trioxide
Capacity: 2,000 TPA
Promoter Holding: 100%
Status: Active (MCA)

Pimpri, Pune · Manufacturing | ISO 9001:2015 & ISO 14001:2015 | JV: Neterwala Group × Campine (Belgium) | 34–55 Employees | Borrowings: ~₹87.6 Cr (Axis + ICICI)

⚠ **Data Transparency Notice:** This is a private limited company. Detailed year-wise P&L, CFO, and balance sheet data are not publicly available for free (filed with MCA but behind paywalls on Tofler/EMIS/TheCompanyCheck). Dashboard uses **verified public data** from Tracxn, Tofler metadata, TheCompanyCheck, and company website. Estimated figures are clearly marked (*).

SEC-04 Business Structure — 4 SBUs

SBU / DIVISION	PRODUCTS / ROLE	INDUSTRIES SERVED	STRATEGIC IMPORTANCE
Antimony Trioxide	Core product; 2000 TPA capacity. Multiple grades. Eco-friendly thermic process.	Flame retardant base for plastics, textiles, PVC, batteries	Primary revenue driver. Largest domestic manufacturer.
Formulations	Custom FR (Flame Retardant) concentrates & ready-to-use compounds	Foam, automotive, construction, transportation	Higher value-add vs raw ATO. Differentiator vs commodity players.
Masterbatches	FR masterbatches tailored to specific base polymers	Plastics processing, cable & wire, packaging	Customisation capability. Reduces client's processing complexity.
Trading	Represents global bromine additive manufacturers in India	Electronics, textiles, industrial applications	Low-capex revenue stream. Complements own product range.

SEC-05 Key Risk Signals

Revenue Volatility
FY2023 saw a spike to ~₹144 Cr, only to contract sharply to ₹118 Cr in FY2024 (−18%). Antimony prices are globally volatile, tied to Chinese export policy — AMS has limited pricing power.

EBITDA Compression
EBITDA fell −47.1% in FY2024 despite stable revenue range. This signals severe margin pressure — likely from input cost inflation (antimony ore) and/or pricing pressure from clients.

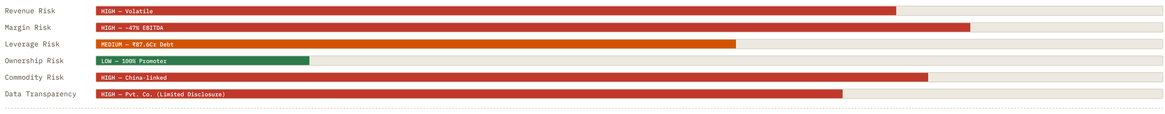
Leverage Concern
₹87.6 Cr in disclosed borrowings against a ₹2.16 Cr paid-up capital base is high. With EBITDA falling steeply, debt serviceability needs monitoring. Lenders: Axis Bank + ICICI Bank.

Promoter Confidence
100% promoter holding (Neterwala Group) since inception — no equity dilution, no external investors. This shows strong family confidence but limits access to growth capital.

Export Exposure
Services customers globally. China dominates global antimony supply — any export restriction from China could benefit IOCPL's raw material sourcing or pricing depending on supply chain position.

R&D Differentiator
In-house R&D and QC lab + pilot plants. ISO certified (9001 & 14001). Positioned as premium formulation partner vs commodity ATO sellers — protects margins long-term.

SEC-06 Risk Assessment (Based on Available Data)



📌 Risk ratings based on available public data only. For full risk picture, detailed MCA filings (via Tofler/EMIS) would be required.

SEC-07 Industry Context — Flame Retardants in India

Market Position
One of India's largest domestic manufacturers of Antimony Trioxide with 2000 TPA capacity. Domestic market is niche — very few organised players of this scale.

Antimony Trioxide Market
Global ATO market ~$1.8 Bn. China controls ~80% of global supply. India relies on imports for a large share. IOCPL's domestic manufacturing is a strategic advantage for import substitution.

Demand Drivers
Rising flame retardant regulations in India (Bureau of Indian Standards), EV battery sector growth, infrastructure cables, and government building safety norms are structural tailwinds.
